

36051 Adaptor for Olympus 43 port and gear system

Instruction Manual

Please follow the instructions below to mount the adaptor on a port.

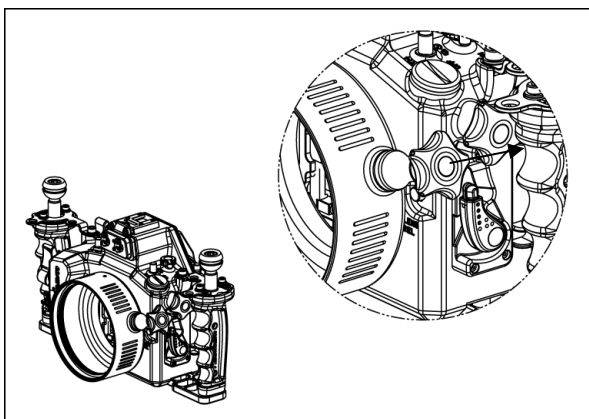

1. Locate the port stopper block in the front housing. Remove the plastic block by unscrewing the two screws. Replace the plastic block with the supplied metal block then fastened by tightening the two screws.

2. Install the camera body only into the housing and mount the adaptor to the housing.

*Please refer to the housing manual for installing camera and mounting port to the housing.

3. Make sure the knob on the adaptor is at its most outward position before mounting/ dismounting the lens. The knob should be left at this position until it is made sure that the lens and gear is properly installed.

4. Attach the Olympus lens gear onto the lens and mount it on the camera (with MMF-3).
5. Engage the gear by pushing the knob of the adaptor inwards, then turn the knob both ways to check if the lens manual focusing is functioning.
6. Attach the Olympus port to the adaptor by turning it clockwise until it cannot go in any further. (You may have to adjust the shade position when using dome port.)

*Please refer to the Olympus manual for installing lens gear and port preparation.
